RACO

Chief Technology Officer

Requirements

Education

- Masters

Experience

At least 10 years

- The applicants should have experience in the following business area(s): IT Enabled Service, Artificial Intelligence (AI) Startup, Business-to-Business (B2B) Software and Services Startup

Additional Requirements

- Age At least 30 years

Required Skills & Experience:

Technical Expertise

- **10+ years** of software engineering experience with **5+ years in technical leadership** (CTO, VP Engineering, Principal Architect, or equivalent)
- **Proven expertise** building and scaling SaaS, B2B software, or enterprise automation platforms
- **Strong cloud architecture knowledge:** AWS, Azure, or GCP; experience with microservices, serverless, containerization (Docker, Kubernetes)
- **Full-stack capability:** Understanding of frontend, backend, database, and infrastructure layers
- **AI/ML Integration:** Experience integrating machine learning models, predictive analytics, or AI capabilities into production systems
- **Database & Data Architecture:** Strong understanding of relational databases (PostgreSQL, MySQL), NoSQL (MongoDB), and data pipeline architecture
- **API Design & Integration:** RESTful APIs, GraphQL, third-party integrations, and system interoperability
- **Security & Compliance:** Knowledge of data security, encryption, compliance frameworks (GDPR, local regulations), and secure coding practices

Leadership & Team Building

- **Team Building:** Proven track record building and scaling engineering teams from 5 to 50+ engineers
- **Mentorship:** Experience mentoring engineers, developing talent, and creating career growth paths
- **Organizational Design:** Ability to structure teams, define roles, and establish clear accountability
- **Communication:** Excellent communication skills—comfortable engaging with board, investors, customers, and technical teams
- **Decision Making:** Strategic thinker who balances innovation with execution, makes decisions under uncertainty

Startup & Growth Experience

- **Startup/Scale-up Background:** Series A-C stage experience or equivalent high-growth environment
- **Rapid Iteration:** Comfortable moving fast, iterating based on customer feedback, and shipping quickly
- **Resource Constraints:** Experience building products with limited resources and maximizing ROI
- **Cross-functional Ownership:** Willingness to wear multiple hats and contribute beyond pure technical leadership
- **Entrepreneurial Mindset:** Passion for building products, solving customer problems, and creating business value

Emerging Markets & Global Experience

- **Emerging Markets Knowledge:** Understanding of emerging market dynamics, infrastructure constraints, and localization requirements
- **Multi-market Expansion:** Experience scaling products across different geographies and regulatory environments
- **Distributed Teams:** Experience leading distributed engineering teams across time zones and cultures
- **Adaptability:** Comfort working in ambiguous environments with limited precedent or playbooks

Preferred Qualifications

- Experience with fintech, edtech, or enterprise automation platforms
- Background in multi-tenant SaaS architecture and platform scaling
- Knowledge of emerging market infrastructure, connectivity, and payment systems
  Experience with performance optimization and building for low-bandwidth environments
  Familiarity with regulatory compliance in multiple jurisdictions
- Track record of successful product launches and market expansion
- Experience with open-source technologies and community engagement

---

Responsibilities & Context

We're Hiring: Chief Technology Officer (**CTO**)

Raco AI Technologies is seeking an exceptional Chief Technology Officer to lead our technical vision, strategy, and execution. We're **Bangladesh's first AI-based UK company**, pioneering enterprise automation solutions across emerging markets with a mission to democratize technology for businesses globally.

The Role: Chief Technology Officer

As our CTO, you will be the architect of our technical future and the leader of our engineering organization. This is not a hands-off executive role—we need a technical visionary who codes, makes critical architectural decisions, and builds world-class engineering teams.

Strategic Responsibilities:

Technology Strategy & Vision

- Define the long-term technology roadmap aligned with business objectives and market opportunities
- Make critical architectural decisions for scalability, security, and performance across multi market deployments
- Evaluate and adopt emerging technologies (AI/ML, cloud infrastructure, automation frameworks) that provide competitive advantage
- Establish technology standards, best practices, and engineering excellence across the organization
- Build partnerships with technology providers, cloud platforms, and AI/ML vendors

Product & Engineering Leadership

- Own the technical product roadmap and ensure alignment with customer needs and market demands
- Lead the design and development of AI-powered automation platform serving millions of users across emerging markets
- Establish engineering culture focused on innovation, quality, and rapid iteration

- Build and scale engineering team from 5 to 50+ engineers across multiple locations (UK and Bangladesh)
- Mentor and develop engineering talent, creating clear career paths and growth opportunities
- Implement agile development practices, continuous integration/deployment, and quality assurance frameworks

Market Expansion & Localization

- Lead technical strategy for Bangladesh market entry and pilot programs
- Design solutions that work in emerging market contexts (connectivity, infrastructure, regulatory compliance)
- Plan technical architecture for scaling from Bangladesh to UK and European markets by Year 3
- Navigate multi-market regulatory requirements (data privacy, compliance, localization) Build technical partnerships with local providers and international platforms

Business Impact & Execution

- Drive product-market fit through rapid experimentation and customer feedback loops
- Translate market opportunities and customer pain points into technical requirements and product features
- Manage technology budget and resource allocation for maximum ROI
- Partner with Sales, Customer Success, and Product teams to ensure customer success and retention
- Establish KPIs and metrics to track engineering productivity, product performance, and business impact
- Drive innovation while maintaining execution velocity and time-to-market

Day-to-Day Responsibilities

- **Code Review & Architecture:** Actively review critical code, make architectural decisions, and maintain technical standards
- **Team Leadership:** Conduct 1-on-1s with direct reports, provide mentorship, and drive performance management
- **Strategic Planning:** Quarterly planning sessions with leadership team on technology roadmap and resource allocation
- **Customer Engagement:** Participate in customer calls to understand technical requirements and validate product-market fit
- **Technology Evaluation:** Assess new tools, frameworks, and platforms; make build vs. buy decisions
- **Cross-functional Collaboration:** Work closely with Product, Sales, and Operations teams on go-to-market strategy
- **Hiring & Recruitment:** Lead recruitment of senior engineering talent and build high performing teams

- **Risk Management:** Identify and mitigate technical risks, security vulnerabilities, and scalability challenges

Leadership & Impact

- Lead technology strategy for a high-growth, venture-backed startup with clear market validation
- Build products that serve millions of users across emerging markets and beyond Shape company culture and establish engineering excellence from the ground up
- Direct access to founders and board—your strategic input directly influences company direction
- Opportunity to establish Bangladesh as a hub for AI and automation innovation

Work Environment

Hybrid/WFH: Flexible work arrangement with option to work from home or office Collaborative, fast-paced environment focused on results over process Autonomy to make technical decisions and drive innovation

Growth Potential

- Scale from a startup to a significant regional player across UK and emerging markets Build and lead a world-class engineering organization
- Influence the future of enterprise automation in emerging markets

The Opportunity

- We're at a critical inflection point. We have validated market demand, proven business models, strong unit economics, and a clear go-to-market strategy. What we need now is an exceptional technical leader to execute our vision and build the engineering organization that will power our growth.
- This is a role for a builder—someone who thrives in ambiguity, moves fast without sacrificing quality, and has the technical depth to make critical architecture decisions. You'll work directly with founders who have 50+ years of combined experience in enterprise software and market expansion.
- We're not looking for someone to maintain legacy systems or manage incrementally. We're looking for someone to pioneer the future of enterprise automation in emerging markets while maintaining world-class technical standards.
