Responsibilities & Context

Seeking a developer who will develop and enhance Anti-Money Laundering (AML) software solutions for financial institutions. The role focuses on building secure, scalable, and high-performance applications using Java for backend services and Angular for modern web interfaces. Candidates with strong algorithmic thinking and competitive programming experience are highly encouraged to apply.

Key Responsibilities

- Design, develop, and maintain AML software applications using Java and Angular.
- Implement features related to transaction monitoring, customer risk profiling, sanctions screening, and case management.
- Develop RESTful APIs and backend services using Java frameworks such as Spring Boot.
- Build responsive and user-friendly front-end interfaces using Angular.
- Integrate AML systems with banking platforms, payment systems, and external data sources.
- Apply strong algorithmic and data structure knowledge to solve complex data processing and transaction analysis problems.
- Ensure system security, performance, scalability, and reliability.
- Write clean, maintainable, and well-documented code following development standards.
- Participate in design discussions, code reviews, testing, and deployment.
- Collaborate with business analysts and compliance teams to translate regulatory requirements into technical solutions.
