FCI (BD) Ltd.

Manager - SAP Programmer, Fashion Analytics & Reporting

Requirements

Education

- Bachelor of Science (BSc) in Computer Science & Engineering

Experience

At least 8 years

- The applicants should have experience in the following business area(s): Garments, Textile

Additional Requirements

- Age At least 32 years

Technical Skill Requirements

Mandatory

- SAP ABAP (Advanced) with S/4HANA experience.
- Strong experience with CDS Views, AMDP, and HANA SQL
- SAP Gateway & OData service development
- Integration technologies (IDocs, APIs, RFC)

Preferred

- SAP Fashion Management (FMS) / AFS
- SAP BW/4HANA
- SAP Analytics Cloud (SAC)
- SAP UI5 / Fiori Elements
- SAP CPI / Integration Suite

Responsibilities & Context

This role is responsible for **hands-on SAP development, solution architecture, and advanced analytics engineering** within an SAP S/4HANA landscape, specifically tailored to **fashion retail data models (style/color/size matrix, seasonal collections, SKU granularity)**. The position combines **ABAP development leadership, HANA-native data modeling, and real-time analytics enablement**.

Core Technical Responsibilities

1. SAP Application Development (ABAP & S/4HANA)

- Design and develop **RICEFW objects** (Reports, Interfaces, Conversions, Enhancements, Forms).
- Advanced ABAP programming including:
    - **Object-Oriented ABAP (OOABAP)**
    - **ALV (OO & SALV), Smart Forms, Adobe Forms**
    - **Enhancement Framework (BAdIs, User Exits, Implicit/Explicit)**
- Develop **ABAP for HANA optimized code**:
    - Code push-down techniques
    - Use of **AMDP (ABAP Managed Database Procedures)**
    - Performance tuning via **SQL trace (ST05), SAT, SQL Monitor**
- Build and expose **OData services (SAP Gateway)** for Fiori/UI5 applications.

2. SAP HANA Data Modeling & Embedded Analytics

- Design and implement **CDS Views**:
    - Basic, Composite, and Consumption views
    - Usage of annotations for UI, analytics, and OData exposure
- Develop **HANA Calculation Views** (Graphical & SQL Script-based)
- Implement **real-time embedded analytics** in S/4HANA:
    - KPI models
    - Analytical queries (CUBE, DIMENSION views)
- Build **virtual data models (VDM)** aligned with fashion business entities.

3. Fashion-Specific Data Engineering

- Model complex retail structures:
    - **Article hierarchy (Style → Color → Size)**
    - Seasonal collections, assortments, variants, and grids
- Optimize handling of:
    - High-volume transactional datasets
    - Stock segmentation and inventory valuation
- Build data structures for:
    - **Sell-through rate, GMROI, stock aging, size curve analysis**
- Implement **time-series analytical logic** for seasonality and trend analysis.

4. Integration & Interfaces

- Develop and manage interfaces using:
    - **IDocs, BAPIs, RFCs**
    - REST/SOAP APIs via SAP Gateway
- Integrate SAP with:
    - POS systems
    - Industrial applications
- Work with middleware:

    - **SAP CPI / PI/PO** (preferred)
- Handle data ingestion pipelines for near-real-time analytics.

5. SAP Analytics & Reporting Stack

- Develop enterprise reporting using:
    - **SAP BW/4HANA (Data Sources, ADSOs, Composite Providers)**
    - **SAP Analytics Cloud (SAC)** dashboards
- Build semantic layers and metrics:
    - KPIs for merchandising, retail performance, and supply chain
- Enable:
    - **Self-service analytics models**
    - Live connections to S/4HANA / BW
- Optimize query performance for large datasets.

6. Performance Optimization & System Stability

- Conduct:
    - Runtime analysis (SAT)
    - SQL tracing, Memory and buffer monitoring
- Implement:
    - Code optimization strategies
    - Efficient indexing and partitioning in HANA
- Ensure scalability for:
    - High-volume retail transaction loads

7. Architecture & DevOps Practices

- Define **SAP development standards and transport strategies**:
    - CTS / ChaRM workflows
- Support CI/CD pipelines where applicable
- Govern code quality using:
    - ATC (ABAP Test Cockpit)
    - Code Inspector

8. Security & Data Governance

- Implement:
    - Role-based access (PFCG)
    - Authorization objects for analytics and reporting
- Ensure compliance for:
    - Data privacy (PII in customer analytics)
- Maintain **data consistency across master/transactional layers**

9. Technical Leadership

- Lead a development team with **code reviews, design validations, and architecture governance**
- Define technical roadmaps for:
    - S/4HANA migration
    - Embedded analytics adoption
- Resolve complex production issues (L3/L4 support)

Domain-Specific Expertise

- Experience handling:
    - SKU-level analytics at scale

Skills & Expertise

ABAP

Compensation & Other Benefits

- Provident fund,Mobile bill
- Lunch Facilities: Full Subsidize
- Salary Review: Yearly
- Festival Bonus: 2
- Service Benefit.
- Health Insurance.
- Group life Insurance.
- Earned Leave Encashment.

Workplace

Work at office

Employment Status

Full Time

Job Location

Dhaka (Savar EPZ)
