MySoft Limited

SQL Database Developer

Requirements

Education

- Bachelor of Science (BSc) in Computer Science & Engineering

Experience

At least 5 years

- The applicants should have experience in the following business area(s): Software Company

Additional Requirements

- Age At most 35 years

Strong experience with:

- Stored Procedures, Functions, Triggers, Views
- CTEs, Temporary Tables, Table Variables
- Window Functions, Dynamic SQL
- Transactions and Error Handling
- Experience optimizing databases containing millions of records.
- Strong understanding of indexing, statistics, partitioning, and execution plans.
- Experience with SSMS, SQL Profiler, and Database Tuning Advisor.
- Knowledge of backup, restore, disaster recovery, and database maintenance.
- Experience with ETL processes, data migration, Git, or Azure DevOps.

Technical Skills

- Advanced T-SQL Development
- Database Design & Data Modeling
- Performance Tuning & Query Optimization
- Execution Plan Analysis
- Index Optimization
- ETL Development & Data Migration
- Database Security & High Availability
- Reporting & Analytics Support

Soft Skills

- Strong analytical and problem-solving abilities.
- Excellent communication and documentation skills.
- Ability to manage multiple priorities.
- High attention to detail and commitment to quality.
- Strong collaboration across technical and business teams.
- Expected Competencies

Responsibilities & Context

We are seeking an experienced SQL professional with advanced expertise in Microsoft SQL Server, database development, optimization, and performance tuning. The ideal candidate will maintain, enhance, and optimize existing databases while designing scalable solutions for enterprise applications. This role requires strong analytical skills, the ability to identify performance bottlenecks, recommend improvements, and collaborate closely with developers and business stakeholders.

Key Responsibilities:

- Design, develop, maintain, and improve existing SQL databases and data models.
- Write, optimize, and troubleshoot advanced T-SQL queries, stored procedures, functions, triggers, and views.
- Analyze execution plans and resolve database performance bottlenecks.
- Design indexing strategies and optimize queries for large datasets.
- Monitor database health and implement performance improvements.

- Enhance existing database architecture and recommend best practices.
- Support application development teams with scalable, reliable database solutions.
- Develop and maintain database documentation.
- Support ETL processes, data migration, reporting, and business intelligence initiatives.
- Ensure database security, integrity, backup, and disaster recovery.
