## Computer hardware engineer

**National average salary:** $106,813 per year

**Primary duties:** These engineers design, build and repair all the hardware that is essential to letting computers work, including monitors, hard disk drives, printers, routers and CPUs. Computer hardware engineers test these items to ensure they work properly and identify and isolate any defects that arise. This role is in demand because it's critical for any tech company to have properly functioning hardware so it can deliver its products or services.
