## Data scientist

**National average salary:** $119,380 per year

**Primary duties:** Data scientists collect and present information to managers and executives to help them make important decisions. They may use machine learning to develop insights based on a data set. Statistical analysis is also one of a data scientist's key responsibilities. This role is in demand because people always want to ensure that they base the decisions they make on consistent trends in data and statistics. Additionally, this role is essential in many industries as data can allow teams to identify areas to improve or gain advantages over their competition.
