DevOps engineer

National average salary: $122,771 per year

Primary duties: DevOps engineers play a critical role in making software development more efficient by bridging the gap between developers and IT staff and helping companies create stable code more quickly. In addition to monitoring, troubleshooting, configuring and editing, DevOps engineers also oversee code releases to ensure these processes are free of issues. Their expertise in IT operations and project management makes them highly valuable to businesses seeking to streamline their software development processes.
