Full Stack AI Engineer Focused on Innovative Application Development

Drive AI engineering and application development by crafting reliable software solutions. Utilize your expertise in TypeScript and React to build impactful customer-facing features from the ground up.

This role requires a full stack engineer with an understanding of applied AI beyond API integration. You will create innovative interfaces that enhance user experience and trust while ensuring robust backend functionality. Strong experience in feature deployment and system reliability is essential to succeed in this engineering position.

Key Responsibilities: • Develop customer-centric AI features from inception • Integrate and scale AI infrastructure effectively • Design user-friendly interfaces balancing motion and interaction • Ensure software reliability in unpredictable environments • Collaborate closely with cross-functional teams on projects

Requirements: • Proficient in React, NextJS, and TypeScript • Experience with applied AI technologies like RAG and multi-agent patterns • Strong understanding of frontend design systems • Familiarity with AI tooling like Postgres and Cloudflare Workers • Based in Canada with ability for periodic office travel
