Information security analyst

National average salary: $90,425 per year

Primary duties: Information security analysts are responsible for identifying and assessing potential security risks, implementing security measures, such as firewalls and encryption protocols, monitoring for security breaches, and responding quickly and effectively to any incidents that may occur. They protect both internal networks and external elements using a variety of strategies to ensure the safety of companies' data and comply with government laws and regulations. The importance of their work lies in the fact that all companies, particularly those that manage and store large amounts of data, protect their information to maintain their reputation and avoid financial loss.
