Machine learning engineer

National average salary: $152,244 per year

Primary duties: Machine learning engineers design, build and deploy machine learning models and systems that can make decisions without explicit programming. They collaborate with data scientists and software developers to integrate machine learning algorithms into applications and software products. They identify and select appropriate data sets, design and implement machine learning algorithms and models, and optimize them for performance and accuracy. They also build and maintain machine learning infrastructure and systems. The work of machine learning engineers is important because it enables the development of intelligent systems and applications that can improve efficiency, productivity and decision-making in many industries.
