Mobile application developer

National average salary: $129,017 per year

Primary duties: Mobile application developers design, test and maintain apps for smartphones. These developers create various types of apps, including games, security-related apps, mobile banking apps and social media apps. Mobile app developers often work with other developers and designers to create mockups for apps and devise a launch strategy. This role is in demand because many people continue to use a wide variety of apps for either daily needs or entertainment.
