Product Manager (Sustainability AI, Canada)

• We seek a dynamic and experienced Product Manager to lead the development and operationalization of AI-powered capabilities across our SAAS Enterprise Sustainability Platform—spanning Sustainability (Environmental, Social, and Governance) regulations, frameworks, and standards
• Product Strategy: Develop and execute a comprehensive product strategy that integrates AI-powered capabilities with sustainability regulations, frameworks, and standards across our Sustainability AI platform
• AI Product Direction: Partner with applied AI engineers to scope, design, and ship LLM-powered features (e.g., agent workflows, retrieval-augmented generation, intelligent assistants for Sustainability reporting). Translate sustainability use cases into clear AI product specs, evaluation criteria, and success metrics
• Vibe Coding & Rapid Prototyping: Use AI-assisted coding tools (e.g., Claude Code, Cursor, Copilot) to independently build working prototypes, internal tools, and proof-of-concept AI applications that accelerate discovery, validate ideas with customers, and de-risk engineering investment
• Regulatory Compliance: Stay abreast of evolving Sustainability regulations, frameworks, and standards at the global, regional, and industry levels, and ensure that our platform remains compliant with relevant requirements
• GHG Accounting & Decarbonization: Shape product capabilities for greenhouse gas (GHG) accounting across Scopes 1, 2, and 3, decarbonization target-setting and tracking (e.g., SBTi, CDP), and audit-ready data lineage—ensuring our platform produces calculations and disclosures that hold up to third-party assurance
• Thought Leadership: Stay abreast of Sustainability frameworks, regulatory trends, and emerging applications of AI in sustainability reporting, and contribute to thought leadership initiatives through blog posts, webinars, and industry events
• Client Engagement: Serve as a subject matter expert on sustainability regulations and standards, providing guidance and support to clients during onboarding, training, and ongoing usage of the platform
• Requirement Gathering: Collaborate closely with clients, stakeholders, and internal teams to gather requirements and understand the needs of various user groups related to Sustainability compliance and reporting

• Feature Prioritization: Work closely with engineering, design, and other cross-functional teams to prioritize features and enhancements based on customer feedback, market trends, and business objectives
• Product Development: Lead the end-to-end product development lifecycle, from conceptualization and design to implementation and release, ensuring timely delivery of high-quality features and updates
• Market Analysis: Conduct thorough market research to identify emerging sustinability regulations, frameworks, and standards as well as the rapidly evolving landscape of AI tools, models, and frameworks relevant to sustainability software, and assess competitor offerings and industry trends
• Performance Monitoring: Establish key performance indicators (KPIs) and AI evaluation frameworks (quality, accuracy, consistency, failure modes) to measure the success and impact of AI-powered and Sustainability-related features, and use data-driven insights to drive continuous improvement
• Cross-Functional Collaboration: Foster strong relationships with cross-functional teams, including sales, marketing, customer success, and legal, to ensure alignment and support for Sustainability-related initiatives

Benefits

• Medical, dental, and vision insurance for employees and dependents
• Flexible paid vacation as well as 10+ observed holidays by country
• Employee equity program
• Retirement savings with employer matching
• Paid parental leave for biological, adoptive, and foster parents
• Monthly stipend to cover the cost of internet and phone
• Remote friendly: Set your own schedule and be flexible about where you work, from our offices in the Bay Area and New York, from home, or a bit of both!
