Python developer

National average salary: $112,815 per year

Primary duties: Python developers build and test Python code for several types of software and apps. They routinely assess and update the programs they use and work with cloud and web development and data mining. Python is another highly popular, general-purpose programming language, and demand for Python developers is high because it's common and simpler than other languages. Python is also popular in machine learning allowing those familiar with it to benefit from the increased need.
