Researcher in AI Networking at Huawei Canada

Advance your expertise with Huawei Canada as a Co-op Researcher focused on Computer Networks for AI Infrastructure. Engage in transformative research that enhances cloud data systems. Become part of the Distributed Data Storage and Management Lab, where you'll tackle unprecedented challenges in cloud-native databases and distributed data management. This position involves analyzing industry strategies and ensuring Huawei's technological contributions are effectively communicated. Collaborate with peers in academia and technology sectors to influence future innovations.

Key Responsibilities:

• Assist in the deployment of AI networking solutions
• Analyze business needs and identify research opportunities
• Communicate technical insights with industry collaborators

Requirements:

• Pursuing a Master's or PhD in Computer Science or related fields
• Proficient in C++ and Python programming languages
• Experience in AI infrastructure or computer networking
• Strong understanding of networking and data architectures
• Proven academic or industry experience in relevant technologies

Utilize your skills to drive networking advancements in AI infrastructure at Huawei Canada.
