Web developer

National average salary: $77,791 per year

Primary duties: Web developers design and execute web builds that meet the needs of their clients. They use their knowledge of programming frameworks, languages and design tactics to create and update websites and apps that are user-friendly, efficient, and effective. In the digital age, having a strong web presence is essential for many companies. Web developers play a crucial role in helping companies increase their reach and customer satisfaction by creating user-friendly and effective websites and apps. Web developers' skills in both front-end and back-end development enable them to create highly usable products that require little support.
