About The Company

Lonza Bioscience is a leading provider of innovative solutions for life science researchers, enabling advancements in therapeutics development and testing. Our comprehensive portfolio supports clients across the entire therapeutic journey, from early-stage research to product commercialization. We specialize in a variety of modalities including cell and gene therapies, recombinant proteins, vaccines, and injectable drugs. Our expertise in primary human cell biology tools allows customers to develop more predictive models, thereby accelerating the path to investigational new drug (IND) approval. Additionally, we serve as a trusted partner for critical raw materials and bioprocessing technologies, helping clients improve processes and ensure quality. At Lonza, we are committed to powering the performance of One Lonza by fostering innovation, collaboration, and excellence in everything we do.

About The Role

The Senior Manager, Digital Commerce (Technical Product Owner) plays a pivotal role within our Bioscience division, focusing on the technical strategy and delivery of our digital commerce platform. This role is specifically scoped to Bioscience and does not encompass the Contract Development and Manufacturing Organization (CDMO) segment. The primary responsibility is to translate complex business and operational needs into scalable, high-quality technical solutions, with a particular emphasis on enterprise integrations such as PunchOut and EDI. Acting as the technical product owner, this position requires close collaboration with engineering, IT, and external partners to manage the product roadmap, backlog, and delivery of critical integrations that support B2B customer workflows.

The role involves both strategic and hands-on responsibilities—shaping the integration strategy and platform evolution at a high level, while also guiding detailed requirements, prioritizing backlog items, and ensuring successful end-to-end delivery. The Senior Manager will serve as the key liaison between business stakeholders from sales, customer service, and commercial operations, and technical teams including engineering, IT, and external integration partners. This position ensures alignment on scope, priorities, and outcomes, facilitating cross-functional discussions to gather

requirements, clarify integration impacts, and manage dependencies. The role also involves overseeing business analysis activities, ensuring requirements are complete, testable, and feasible, and supporting agile delivery processes to meet project timelines and quality standards.

Qualifications

The ideal candidate will have a strong background in enterprise platform management, with proven experience as a Technical Product Owner or Senior Product Manager. Essential qualifications include experience with SAP Commerce Cloud (Hybris), demonstrated ownership of product and integration roadmaps, and the ability to make informed prioritization and trade-off decisions. Knowledge of ERP systems, middleware, and integration platforms such as SAP CPI or Mulesoft is highly desirable. Certifications in Product Ownership or Agile methodologies are advantageous, along with prior hands-on experience as a Business Analyst. Familiarity with regulated industries like Life Sciences, Biotech, or Pharmaceuticals is a plus, especially regarding compliance and quality standards.

Other key qualifications include strong translation skills for converting business needs into technical requirements, experience managing cross-functional teams, and a comprehensive understanding of end-to-end commerce flows and system-to-system integrations. Candidates should demonstrate excellent communication skills, stakeholder management, and the ability to work effectively in an Agile environment.

Responsibilities

- Own and maintain the digital commerce product and integration roadmap, ensuring alignment with business priorities and technical dependencies across PunchOut, EDI, ERP, and other commerce platforms.
- Refine the roadmap and backlog regularly based on business value, delivery insights, integration complexity, and stakeholder feedback, making strategic trade-offs as needed.
- Act as the primary liaison between business stakeholders and technical teams, facilitating requirements gathering, clarifying integration impacts, and managing dependencies to ensure shared understanding and alignment.
- Translate operational workflows and business objectives into clear, actionable requirements and user stories, ensuring technical feasibility and readiness for end-to-end integrations.
- Lead planning and execution of PunchOut and EDI initiatives, coordinating across internal teams and external partners to ensure timely and high-quality delivery.

- Provide regular updates on progress, risks, dependencies, and timelines to stakeholders, proactively managing expectations and escalating issues when necessary.
- Manage and prioritize the product backlog, participating in Agile ceremonies such as backlog grooming, sprint planning, demos, and retrospectives to support continuous improvement.
- Oversee business analysis activities, ensuring requirements are comprehensive, testable, and aligned with technical standards; approve scope, prioritization, and acceptance criteria.

Benefits

At Lonza, we offer a dynamic and inclusive work environment that promotes professional growth and innovation. Our compensation programs recognize high performance, and we provide a comprehensive benefits package tailored to role and location. Employees have access to health and wellness programs, learning and development opportunities, flexible work arrangements, and a collaborative workplace culture. We believe in fostering diversity and inclusion, ensuring all team members feel valued and empowered to contribute their best work. Our global benefits program supports work-life balance and overall well-being, reflecting our commitment to our employees' success and satisfaction.

Equal Opportunity

Lonza is an equal opportunity employer committed to creating an inclusive environment for all employees. We do not discriminate based on race, ethnicity, gender, age, sexual orientation, disability, religion, or any other protected characteristic. We believe that diversity drives innovation and excellence, and we are dedicated to providing equal employment opportunities to all qualified candidates. Our policies promote fairness, respect, and equal access to career development and advancement opportunities across our organization.
