Job Overview

The purpose of this role is to support the organization's Information Security Management activities by strengthening security awareness, fostering a security-conscious culture, ensuring compliance with security standards, and supporting the implementation of effective security controls across systems and applications. The role focuses on security awareness initiatives, ISMS activities, red team assessments, secure project delivery, and continuous improvement of information security practices.

Responsibilities

- Develop and deliver cyber security awareness programs through training, campaigns, and phishing simulations to promote to establish a secure culture.
- Conduct security awareness sessions for employees, management, partners and security ambassadors using physical, virtual, and team-based activities.
- Support ISO 27001/ISMS or other respective standards like ISO 42001 compliance by assisting with risk assessments, audits, documentation and compliance monitoring.
- Monitor security events using NG-SIEM, develop dashboards and use cases, and assist in detecting, investigating and escalating security incidents.
- Perform security assessments including penetration testing, vulnerability scanning, red team exercises and validate remediation of identified vulnerabilities.
- Support secure project delivery by conducting security reviews, risk assessments, control testing, and ensuring security requirements are met before project go-live.
- Ability to create engaging security awareness content and communicate security topics to different audiences.
- Strong communication and presentation abilities, analytical and problem-solving skills with attention to detail.
- Ability to collaborate with cross-functional teams and external stakeholders.
- Self-motivated with willingness to learn and work to any other security domain as required
- Demonstrate positive attitude, teamwork, ownership, initiative and self-organization.
- Proven ability to work effectively under pressure and produce anticipated results.
- Able to multi-task and work independently with minimum supervision to meet deadlines

Education & Skill

- Engineering graduate preferably in CSE/ EEE/ ECE or related field.
- Knowledge of ISO 27001/ISMS, ISO42001, security awareness, risk management, emerging threats and compliance practices.
- Familiarity with EDR and NG-SIEM tools, security monitoring and log management.
- Knowledge of security assessment tools like (Nessus, SIEM, Acunetix, Metasploit, Burp suite etc)
- Relevant certifications such as Security+, CEH, CSA, ISO 27001 Lead Auditor/Implementer will be preferred.

Experience

At least 4 years of experience in Information Technology or Telecommunication Industry with at least 2 years of experience in Information Security roles.
