About the Role

We are seeking a talented Software Engineer to join our X Money team, focused on building a revolutionary global payment network that will serve over 600 million users and rival the world's largest financial institutions. In this role, you will specialize in backend development, designing and optimizing robust microservices to ensure scalability, security, and reliability. You will support full-stack efforts, collaborate with cross-functional teams on payments, fraud detection, and compliance initiatives, and contribute to the creation of a high-scale financial products platform. This is an opportunity to work on greenfield projects in a fast-paced, startup-like environment, driving innovation at the intersection of AI and finance.

Responsibilities

- Develop and optimize microservices for high-concurrency transactions using Go, Postgres, and Kafka.
- Collaborate on system architecture, testing, and monitoring to ensure uptime and performance.
- Build internal tools using frontend technologies as needed to support operational efficiency.
- Support the Technical Lead in risk mitigation and align with engineering, product, and compliance teams to drive project success.
- Contribute to the development of secure, scalable systems for handling financial data and transactions.
- Iterate rapidly on feedback to deliver high-quality solutions in a dynamic environment.

Required Qualifications

- 5+ years of software engineering experience, with a strong focus on backend development.
- Proficiency in Go or similar languages and experience with databases (e.g., Postgres) and streaming systems (e.g., Kafka).
- Familiarity with building distributed systems for high-scale, low-latency environments.
- Knowledge of handling secure financial data.
- Ability to contribute to frontend development for internal tools when required.
- Strong communication and problem-solving skills, with a collaborative mindset.

Preferred Qualifications

- Experience in fintech, payments, or regulatory frameworks (e.g., PCI-DSS, AML/KYC).
- Prior work in a fast-paced, startup-like environment on greenfield projects.
- Comfort navigating ambiguous requirements and iterating based on feedback.
- Passion for leveraging AI to transform financial systems.

Interview Process

After submitting your application, our team will review your CV and statement of exceptional work. If your application advances, you will be invited to a 15-minute phone interview to discuss basic qualifications. Successful candidates will proceed to the main process, which includes:

- Coding assessment in a language of your choice.
- Systems hands-on: Demonstrate practical skills in a live problem-solving session.
- Project deep-dive: Present your past exceptional work to a small audience.
- A meet-and-greet with the wider team. Our goal is to complete the main interview process within one week. All interviews will be conducted in person if possible.
