[Hiring] Builder Wanted- Fullstack AI Self Starter

Today:
live entertainment is passive and cloud-dependent. we’re making it collaborative, real-time, and distributed. creators compose with attention instead of renting it.

What we are creating:
infinite spaces is developing real-time spatial orchestration for film/TV/live events. bevy engine, distributed collaboration, AI, integrations with TouchDesigner/Unreal/Disguise. no cloud dependency.

Who we're looking for:
rust systems engineers (production-level). Distributed systems / CRDT / mesh networking. Fullstack JS/TS. LLM integration experience. Game dev and/or Kubernetes background is a bonus.

What you will be remembered for:
building collaborative spatial experiences where creators author reality in real time. creators get paid every time. audiences participate.

Who are you:
i build stuff, i am the owner, i believe in distributed trust. i say no to cloud gatekeeping. i believe spectators should be active in experiences.

Where:
seattle, wa but remote ok.
