Position

In this role, you will coordinate and update pipelines integrity-related procedures and monitor the Pipeline Integrity Management plan through the Pipelines Integrity Management System (PIMS), ensuring compliance with established KPIs. You will assist in implementing the company's Asset Integrity Policy.

Key responsibilities include coordinating the implementation and maintenance of the PIMS database and applications, participating in the development and maintenance of systems and procedures for PIMS implementation and reporting/auditing, and facilitating data gathering and quality checks between the Pipeline Integrity unit and Maintenance/Inspection/Operations before updates to the pipeline database. You will also ensure regular updates of the required procedures for implementing the PIMS solution, coordinate risk

assessments, and conduct threat analysis reviews for assigned pipeline segments, as well as identify and coordinate the resolution of integrity-related issues.

To qualify for this position, candidates should hold a Bachelor's Degree in Mechanical, Chemical, or Metallurgy Engineering and have at least 6 years of experience in pipeline design, operations, and maintenance within a large industrial organization, preferably in the Oil and Gas industry. A strong technical background in pipeline risk management and analysis, familiarity with fitness for service assessments, and knowledge of HSE procedures and practices are essential. Additionally, strong planning, organizing, scheduling, coordinating, checking, examining, and recording skills are required. Professional certifications, as applicable, will be an asset.
