Financial Professional

1. Role Overview Mercor is partnering with a leading AI organization to engage credentialed finance professionals for a project focused on improving the financial reasoning of AI systems. This flexible, contract-based engagement involves evaluating financial scenarios, verifying figures and rules, and refining model outputs.

2. Key Responsibilities

- Review AI-generated outputs across a range of finance topics
- Verify figures and rules against authoritative sources, including quantitative checks
- Assess financial reasoning and provide structured feedback on model performance
- Collaborate with researchers to assess and improve model performance

3. Ideal Qualifications

- U.S.-based finance professional with a recognized credential — CPA, EA, CFP, or CFA (in good standing where applicable)
- 2+ years in a substantive finance role (tax, financial planning, analysis, IB/PE, or advisory)
- Demonstrated ability to verify figures and rules against authoritative sources, including basic quantitative checks
- Strong quantitative verification — able to independently recompute a stated figure
- Comfort checking rules in unfamiliar systems against official sources

4. More About the Opportunity

- Remote and asynchronous — flexible scheduling
- Project-based work at the intersection of finance and AI

5. Compensation & Contract Terms

- $100–200/hour for U.S.-based professionals
- Paid weekly via Stripe Connect
- Independent contractor engagement

6. Application Process

- Submit your resume to begin
- Complete a short form outlining your credential and finance background
- Mercor will follow up with qualified applicants
