[Hiring] **Game Designer**
FOR HIRE - Game / Level Designer
Hello,

I am working on a passion project. A demo that I am hoping to turn into a full on game one day. Its a monster catching RPG, top down pixelated (think old school pokemon).

I am working on fleshing out my ideas for the combat systems. To make it unique rather than copy pokemon. I have some ideas I am confident in but would like a second opinion to help me build them to be the best they can be.

To this end I am looking for someone who will be respectful, offer honest feedback, and keep these ideas between us (no stealing please). This is a long term project so someone I work well with and is very passionate is a huge plus.

Please also have experience with pokemon or games related to that.
I am working in godot so please keep that in mind for the project.

As for budget, I dont know what these jobs offer. So my budget is flexible to meet it, its just a matter of ensuring its something I find reasonable to spend.

Thanks and I look forward to speaking to you!
