Remote Part-Time Web Designer / Sales Engineer for Van Conversion Startup

We are a small California-based design / build company developing rapidly-assembled, lightweight van conversion interiors using industrial materials and modern manufacturing methods. Our modular ecosystem of products, from kitchen galleys and closets to pantries and cargo management solutions gives customers the freedom to experiment with their van layout over time, reducing decision paralysis and saving money on costly renovations and upgrades.

Our website is in need of improvement.

Some of the goals that we have include:

* Better landing page, better CTAs, better incentives to drive urgency
* Better strategy for users to book consultation calls, pay deposits, sign-up and provide their info, etc.
* Improved fonts and copy
* Ability for users to login with their Gmail / Facebook and save their configuration or lock in special deals.
* Better integration with a CRM and implementation of automated or AI-driven marketing outreach.
* Condensed, ultra-readable organization of critical information.
* Improved analytics that can inform better web design choices over time, better understanding of visitor retention, activity on-page, bounce-rates, etc.
* SEO optimization and ability to inform web design based on keyword data.

Therefore we are not only looking for someone who has the technical web-design competence, but someone who also has the strategic vision and experience to help take an existing website to the next level with targeted design improvements and powerful sales features. Framer competence mandatory. While the above goals are what come to our minds for how to augment the website, we are also open to the right person helping us reframe or revise these goals based on their expertise. If you have the skills and experience to help us with this project and want to be involved in helping a radical small business develop some of the best and most innovative van conversions in the world, please comment with a brief description of your qualifications and a link to a portfolio.

I will DM you with a link to our website information about further steps.
