Salesforce Developer Engineer 3

Comcast Advertising is driving the TV advertising industry forward, from delivering ads to linear and digital audiences to pioneering the tech that makes it possible. We help brands connect with their audiences on every screen using advanced data, technology, and premium video content. Our media sales division helps local, regional, and national brands reach potential customers through multiscreen TV advertising. Our ad tech division FreeWheel provides comprehensive adtech that makes it easier to buy and sell premium video advertising across all screens, data types, and sales channels.

Job Summary

At Comcast, we are committed to fostering a diverse and inclusive workplace that reflects our employees, customers, and communities. We are seeking a Salesforce Developer to help advance the technical maturity, scalability, and innovation of our enterprise Salesforce ecosystem. If you are passionate about building high-quality, secure, and scalable solutions, this role is for you.

Job Description

The Salesforce Developer plays a critical role in designing, engineering, and deploying solutions across Comcast's multi-cloud Salesforce platform. You will collaborate with product owners, architects, and cross-functional business units to deliver robust, scalable, and secure capabilities that support enterprise-level operations. This role blends hands-on development, complex configuration, system integration, and platform governance.

Key Responsibilities

Design, develop, test, and deploy custom Salesforce solutions using Apex, Lightning Web Components (LWC), Visualforce, and declarative tools.

Translate complex business requirements into scalable technical specifications and high-quality implementations.

Implement and maintain integrations using REST/SOAP APIs, MuleSoft, and third-party platforms.

Apply enterprise-level development practices including source control, code reviews, unit testing, and CI/CD pipelines (Copado preferred).

Configure Salesforce using Flows, validation rules, advanced security models, and Lightning App Builder.

Support data modeling, data quality, and reporting needs across business units.

Troubleshoot and resolve escalated technical issues; ensure timely follow-through and documentation.

Participate in Agile Scrum ceremonies: sprint planning, backlog grooming, retrospectives, and daily standups.

Stay current with Salesforce releases, AI-driven capabilities, platform enhancements, and industry best practices.

Contribute to the continuous improvement of Comcast's Salesforce ecosystem, ensuring alignment with architectural standards and long-term scalability.

Required Qualifications

Associate's or Bachelor's degree in Software Engineering, Computer Science, or equivalent experience.

5+ years of hands-on Salesforce development experience in enterprise environments.

Strong proficiency in:

Apex, LWC, Visualforce, SOQL/SOSL

HTML, CSS, JavaScript

REST/SOAP web services

Salesforce Experience Cloud (Required) and Sales Cloud (required) and at least one of: Media Cloud, Service Cloud.

Proven ability to design and implement complex configurations and custom solutions.

Experience with GitHub and CI/CD tools (Copado preferred).

Experience integrating Salesforce with MuleSoft and external systems.

Strong understanding of Agile methodologies.

Preferred Qualifications

Salesforce Certifications such as:

Administrator, Platform App Builder, Platform Developer I/II

Experience in Media, Advertising, or large-scale enterprise environments.

Familiarity with architectural frameworks and enterprise governance models.

Why Comcast

Work on a large, evolving, multi-cloud Salesforce ecosystem

Exposure to AI-driven tools and next-generation platform capabilities

Collaborative, inclusive culture with strong technical leadership

Opportunity to influence platform strategy and enterprise architecture

Responsibilities:

Collaborating with cross-functional teams to design, develop, and integrate innovative software solutions that align with business needs
Conducting analysis of system requirements and the customization of applications to ensure optimal functionality
Assisting with the software update process for existing applications and roll-outs of software releases
Mentoring junior engineers, fostering a culture of technical excellence and shared knowledge within the team
Engaging with Quality Assurance to verify that software meets technical specifications and delivering high-quality, reliable applications
Troubleshooting and resolving complex technical issues in software applications and systems
Synthesizing market research and industry trends to inform project strategies and enhance product offerings
Conducting training sessions for operational staff to ensure effective use of internally developed applications
Consistent exercise of independent judgment and discretion in matters of significance.
Regular, consistent and punctual attendance. Must be able to work nights and weekends, variable schedule(s) as necessary.
Other duties and responsibilities as assigned.
Employees at all levels are expected to:

Understand our Operating Principles; make them the guidelines for how you do your job.
