Position

At the company, we are dedicated to staying ahead of the curve by embracing the latest technologies and strategies to streamline integration processes and enhance infrastructure efficiency. As a valued member of our team, you will play a pivotal role in managing and optimizing our integration landscape, ensuring smooth data flow and system interoperability across our enterprise platforms. If you are passionate about creating seamless integration solutions and driving technological excellence, we invite you to apply and contribute to the success of the company.

As a Solutions Architect, you will architect, design, and communicate a system's high-level structural and behavioral aspects, to enable and guide the design and development of integrated solutions that meet current and future business needs, in alignment with corporate IT standards and architecture guiding principles. This necessitates engagement throughout the lifecycle of projects by taking full responsibility for the solution architecture.

Responsibilities

- Develop optimal, fit-for-purpose, and aligned IT architecture solutions that meet customer requirements. Ensure architecture is robust, appropriate, and high-quality, conforming to corporate IT standards and roadmaps. Take accountability for the end-to-end architecture, including architecture and technology decisions.
- Develop Enterprise Architecture standards and guidelines in the information, application, and technology domains. Work closely with Manager Enterprise Architecture and other peer architects in the development of technology advancements and adaptation of new technologies and patterns.

- Continuously monitor industry trends, identify and evaluate relevant technologies and tools, and showcase business value by executing Proof of Concepts by engaging relevant IT teams.
- Establish policy, guidelines, and strategy for selecting system components and their designs. Assess solution designs to ensure they effectively use architectural patterns and adhere to the guidelines. Promote the reuse of solutions, platforms, and services. Contribute to the enterprise architecture repository.
- Guide, mentor, and motivate development team members in adopting good engineering practices, tools, and techniques throughout the development process. Advise and support team members in overcoming technical challenges by providing expert consultancy and coaching.
- Conduct architecture reviews of vendor products as part of the selection process and other critical production applications with Software Engineering development teams. Provide architecture recommendations for the short and long-term improvement of applications.
- Develop logical infrastructure solutions in alignment with technology standards. Work closely with infrastructure teams to ensure that the physical infrastructure designed meets project requirements. Oversee the development to ensure the development team's design and implementation align with the proposed architecture definition. Collaborate with the quality engineering team to ensure that the final solution meets the agreed non-functional requirements.
- Collaborate closely with Manager Enterprise Architects to ensure alignment of information, application, and technology architecture to the overall architecture principles, framework, and guidelines.
- Own, manage, and maintain the architecture roadmap and runways of small to medium-sized initiatives, products, environments, and/or platforms. Act as a product owner and be accountable for proactively identifying, prioritizing, and overseeing the development of technical enablers, technical debts, quality improvements, and application modernization activities.
- Drive architecture decisions and be accountable for their implications regarding solution costs, delivery schedules, application complexity, technical debt, and overall solution performance.

Qualifications & Experience

- Bachelor's degree in Computer Science, Engineering, or an equivalent IT-related discipline.

- 5+ years of experience in designing and developing large-scale, complex, distributed, mission-critical applications in heterogeneous environments.
    - Hands-on experience in detailed business system architecture and design technical leadership across groups of technical architects and senior developers. Ability to influence delivery plans based on architecture and skills constraints.
- Understanding of Architecture Methods, Principles, and Patterns (OOAD, GoF, SOA, etc.).
- Understanding of Architecture and design artifacts (Archimate, C4, UML models, etc.).
- Understanding of agile software development methodologies such as SCRUM and Scaled Agile.
- Understanding of Open Source Frameworks (Apache, Spring, etc.).
- Understanding of cross-cutting architecture capabilities (Rules, Workflow, Security, etc.).
- Understanding the big picture view, non-functional requirements, and practices such as observability, automation, etc.
- Understanding of architecture styles such as microservices, event-driven architecture, and cloud-native applications.
- Understanding of well-architected framework for cloud deployments.
- Preferably good understanding and experience in the airline domain.

Salary & Benefits

Join us in Dubai and enjoy an attractive tax-free salary and travel benefits that are exclusive to our industry, including discounts on flights and hotel stays around the world.
