Staff AI Engineer

Unqork empowers enterprises to accelerate growth by rapidly building, testing, and running AI-powered Regenerative Applications. Trusted by the world's largest organizations in highly regulated industries, Regenerative Applications become more secure over time while significantly reducing technical debt—allowing businesses to focus on innovation rather than maintenance. Unqork's customers include Goldman Sachs, Marsh, BlackRock, and the U.S. Department of Health and Human Services.

At Unqork, we value inclusive and innovative thinkers who boldly challenge the status quo. We encourage you to apply!

Our team builds an AI agent that assists users in building Unqork applications, and we're looking for an engineer to help shape it — from how the agent reasons, to the tools it uses to build and test applications, to the backend that makes it fast and dependable at scale. This is a blend of applied AI engineering and backend systems work, well suited to someone who has built agentic products and enjoys owning ambiguous, high-impact problems end to end.

The Impact U will make:

Report directly to our VP of Agentic AI
Shape the core intelligence and behavior of the agent — how it interprets intent, plans, assists, and recovers from failure — so that it reliably helps users build working Unqork applications.
Help scale the backend that powers the agent in production, contributing to a service that stays fast, observable, and resilient as usage grows.
Drive how we measure and raise agent quality over time, turning real-world usage into a feedback loop that makes the product steadily more capable and trustworthy.
What U bring:

Strong software engineering fundamentals — you design clean systems, reason about tradeoffs independently, and ship well-tested code that holds up in production.
Experience building and operating backend services at scale, with a feel for performance, reliability, and observability; proficiency in TypeScript and Python.
A track record of building AI- or agent-powered products, and good judgment about how to apply LLMs to real problems — what they're good at, where they break, and how to design around both.
Strong product intuition — you make sound product decisions in ambiguity, weigh user needs against technical tradeoffs, and know which problems are worth solving.
You are an avid user of AI coding tools and are passionate about exploring how AI can automate workflows, enhance creativity, and increase your personal impact.
Nice to haves:

Experience with agent frameworks or developer kits (e.g. ADK) and the broader LLM tooling ecosystem.

Background in developer tools, low-code/no-code platforms.
Front-end development skills with TypeScript/React
Compensation, Benefits, & Perks

💻 Work from home with a remote-first community

🏝️ Unlimited PTO (and the encouragement to use it)

📝 Student loan payback program

🏥 100% employer-covered medical, dental, and vision options available to you and your dependents

💸 Flexible Spending Account (FSA)

🏠 Monthly stipend toward your WFH setup, vacation, development and more

💰 Employer-sponsored 401(k) with contribution match

🏋️ Subsidized ClassPass Membership

🍼 Generous Paid Parental Leave

💲 Hiring Ranges:

Tier 1: $155,000 - $220,000
Tier 2: $145,000 - $210,000
Unqork employs a market-driven approach to establish compensation ranges. In addition to a base salary, employees may also be eligible to receive a target incentive and company equity in the form of stock options.

An employee's compensation within the range provided above depends on a variety of factors including, but not limited to, their location, role, skillset, level of experience, and similar peer salaries.

As a remote-first company, Unqork incorporates a geographic differential into our compensation structure, depending on the candidate's location. We utilize a tiered system—Tier 1 and Tier 2—to accurately reflect local market rates and ensure our compensation packages are both fair and competitive.

Our geographic tiers are defined as follows:

Tier 1: New York Metro, Seattle Metro, San Francisco Bay Area
Tier 2: All other US and US territory locations

Unqork is an equal opportunity employer. We will consider all qualified applicants without regard to race, color, nationality, gender, gender identity or expression, sexual orientation, religion, disability or age.
