[Hiring] [Hybrid] [US] - Lead, Supply Chain Analytics ($150K-$160k)

Location: Arlington, VA

on-site 3 days a week / work from home 2 days a week

Responsible for managing key strategic projects, driving analytical advancements, and supporting the technical strategic direction of the team. Collaborate with senior leadership to develop and implement robust technical analytics strategies, processes, and standards that align with organizational goals. Work in partnership with team leadership to create a comprehensive technical analytics capabilities roadmap, aimed at upskilling team members and benchmarking against industry best practice. Provide expert advice and establish guidelines for analytics methodologies, fostering a culture of best practices within the team. Lead the execution of proof of concepts, pilots, and special projects, ensuring alignment with the strategic objectives set by the leadership team. Oversee the design, development, and maintenance of key analytics solutions, ensuring compliance with established standards and best practices, particularly for less experienced team members and end users. Partner with Supply Chain, Analytics, and Data Quality teams to identify and implement business process efficiencies and improvements. Provide coaching and mentorship to both functional and technical analysts, fostering skill development and knowledge sharing. Create and maintain comprehensive reports, dashboards, and visualizations to effectively communicate data analysis results and actionable recommendations.
