[Hiring] [Onsite] [US] - Full Stack Software Engineer ($141k-$162k)

HIRING

- Experience : 3-5 years
- Location : Sunnyvale, California — 5 days a week in-office

Your Toolkit

- 3–5+ years of professional experience in full-stack or UI-focused software engineering
- Strong frontend experience with React, TypeScript, JavaScript, HTML5, and CSS3
- Experience building backend services and APIs using Node.js, TypeScript, or similar technologies
- Solid understanding of RESTful API design and distributed system communication patterns
- Experience with modern build systems, CI/CD pipelines, and frontend tooling
- Familiarity with version control systems (Git) and collaborative development workflows
- Understanding of performance optimization, browser rendering, and debugging techniques
- Knowledge of testing frameworks and best practices across frontend and backend layers
- Exposure to cloud platforms (AWS, Azure, GCP) and containerization technologies (Docker, Kubernetes) is a plus
- Bachelor’s degree in Computer Science or related field (Master’s preferred)

Bonus Points

- Experience building microservices or service-oriented architectures
- Familiarity with accessibility standards (WCAG 2.0+) and inclusive design practices
- Experience with frontend performance monitoring and metrics (e.g., INP, latency optimization)
- Exposure to large-scale SaaS platforms or cybersecurity products
- Experience working closely with design systems and component libraries
