[For Hire] [Remote] [Worldwide] - Backend Engineer | Go, Node.js/TypeScript, Rust | APIs, Distributed Systems, Cloud Infrastructure

FOR HIRE
Backend Engineer with 5+ years of experience building scalable systems, APIs, and backend infrastructure for startups, middle-sized and large corporations.

What I can help with:

- Backend API development (REST / GraphQL / gRPC)
- Microservices architecture
- Database design (PostgreSQL, MySQL, MongoDB, Redis)
- Cloud infrastructure (AWS, Docker, Kubernetes)
- Payment integrations
- Authentication systems
- Performance optimization
- System design for scalable applications

Experience:

- Built scalable backend systems handling high traffic workloads
- Worked on distributed systems and performance optimization
- Designed APIs used by web/mobile applications
- Experience working with startups and fast-moving teams

Open to:

- Remote full-time roles
- Contract work
- Freelance backend projects

DM me if you’re hiring or need backend support.
