CAD Designer
Memphis, TN

ABOUT THE ROLE:
As a CAD Designer at xAI, you will play a critical role in supporting the design and development of our state-of-the-art data centers and AI infrastructure. You will create detailed technical drawings, models, and documentation that enable rapid construction, installation, and iteration of complex mechanical, electrical, and architectural systems. Working closely with engineering, construction, and facilities teams, you'll help translate innovative concepts into precise, buildable designs that support xAI's mission to advance scientific discovery.

RESPONSIBILITIES:
Develop and maintain detailed 2D drawings and 3D models using AutoCAD, Revit, and other CAD/BIM software
Create layouts and schematics for mechanical, electrical, plumbing (MEP), and structural systems in data center environments
Collaborate with engineers and project managers to incorporate design changes and ensure accuracy
Produce construction documents, as-built drawings, and installation details
Manage drawing revisions, version control, and documentation standards
Perform site visits and field verification to ensure drawings reflect actual conditions
Support multiple projects simultaneously in a fast-paced, high-growth environment
BASIC QUALIFICATIONS:
3+ years of professional CAD design experience, preferably in industrial, data center, or mission-critical facilities
Strong proficiency in AutoCAD and Revit
Associate degree or higher in Drafting, Architecture, Engineering, or a related field
Excellent attention to detail and ability to produce accurate technical documentation
PREFERRED SKILLS AND EXPERIENCE:
Experience with BIM 360, Navisworks, or other coordination tools
Background in data center, semiconductor, or heavy industrial design
Knowledge of MEP systems, electrical layouts, and structural detailing
Familiarity with construction processes and ability to read/interpret engineering specifications
Experience working in a fast-moving tech or construction environment
ADDITIONAL REQUIREMENTS:
Ability to work onsite in Memphis, TN / Southaven, MS area
Strong communication and collaboration skills
Comfortable working in a dynamic, rapidly evolving organization
