Controls Engineer

ABOUT THE ROLE:
The xAI datacenter control systems team is looking for a highly-motivated Controls Engineer to support the operation, design, and optimization of our advanced data center infrastructure. This person will play a key role in maintaining the stability and efficiency of the systems that power xAI's groundbreaking AI research. The Controls Engineer will collaborate with cross-functional teams to monitor and improve the performance of the data center throughout its lifecycle. This individual will work closely with Operations and Maintenance to ensure the systems are running smoothly, from day-to-day management to long-term upgrades and expansions.

RESPONSIBILITIES:
Executing the implementation and modification of Building Management System (BMS), Electrical Power Management System (EPMS), and any other SCADA systems critical for the operation of current and future data centers
Overseeing the operation of critical systems such as chillers, pumps, and power distribution, using PLCs and other industrial control technologies
Preparing specifications for Human-machine Interface (HMI) including graphics standard for interpretation by Grok
Implementing and maintaining automated controls for fire safety and emergency shutdown procedures (ESOP)
Developing a corporate-level reporting dashboard to monitor the operational trends such as power usage effectiveness (PUE) and performance/cost, and dynamically adjust the infrastructure set points for optimal performance
Coordinating with utility providers to automate demand and operational responses to upstream grid events
BASIC QUALIFICATIONS:
Bachelor's Degree in an Engineering discipline: Controls and Computer Control Systems, Computer Science, Mechatronic Engineering, Automation Engineering, etc., or equivalent experience
5+ years of experience as a hands-on Controls Engineer working with industrial control systems
Ignition SCADA Programming Experience
Siemens TIA Portal PLC Programming Experience
Physical Requirements:
Ability to work for extended periods of time standing, when needed
Work is often performed in tight quarters and physical dexterity is necessary to perform job functions
Comfortable working in an environment requiring exposure to noise
Ability to lift or carry 10-15lbs
Ability to work evenings and weekends as needed
Position is subject to pre-employment drug and random drug and alcohol testing
PREFERRED SKILLS AND EXPERIENCE:
Advanced proficiency in programming industrial equipment in all IEC 61131-3 languages with a focus on structured text and ladder logic

Experience with industrial control hardware from leading manufacturers (e.g. Siemens, SEL, Rockwell)
Familiarity with Human Machine Interface (HMI / GUI) development using platforms such as Ignition, SEL, etc
Methodical troubleshooting approach
Strong documentation and communication skill set
Technical project management mindset
Team-player, takes initiative, and highly motivated
