IT Systems Engineer
Palo Alto, CA

ABOUT THE ROLE:
The IT Systems Team at 𝕏 manages a dynamic and evolving virtual infrastructure that provides secure, high-performance, and reliable corporate resources for business-critical users and applications. This role focuses on building, deploying, and managing internal Windows and Linux infrastructure while collaborating with other teams to develop scalable solutions.

RESPONSIBILITIES:
Building, managing, and supporting complex application stacks on Windows and Linux Servers.
Providing Windows and Linux troubleshooting and technical support.
Deploy, configure and support VMware technologies, including vCenter, ESX and Horizon.
Use Puppet Enterprise to automate and manage configurations.
Working with other engineering teams and third-party vendors to implement scalable solutions.
Ensuring compliance by collaborating with internal audit and compliance teams.
Developing and maintaining standard operating procedures.
Participating in a 24/7 on-call support rotation.
Managing and monitoring all installed Windows and Linux systems and infrastructure.
Installing, configuring, testing, and maintaining operating systems and system management tools.
Proactively ensuring high levels of system availability and reliability.
Monitoring and optimizing application performance, identifying bottlenecks, and collaborating with developers to implement solutions.
Writing and maintaining custom scripts to improve system efficiency and automation.
Required Qualifications
Deep understanding of infrastructure management and automation
3 to 5 years of experience in the following:
Systems Engineering for Corporate Infrastructure.
Managing large-scale Windows and Linux server environments.
Virtualization at scale.
Configuration Management.
Managing scalable storage solutions, preferably NetApp.
Developing and maintaining performance metrics for systems.
Strong understanding of Puppet Enterprise and Puppet Open Source.
Strong understanding of basic networking concepts.
Proficient with using Puppet to automate and manage configurations.
Ability to translate business needs into technical solutions.
Outstanding analytical and problem-solving skills.
Strong written and verbal communication skills.
Experience writing technical design documents and maintaining documentation.
Familiarity with working in a source-controlled environment.
Proficiency in scripting languages such as Bash, Python, or Perl.

Experience with VMware services, including VMware data center virtualization and VMware Horizon.
BASIC QUALIFICATIONS:
Familiarity with DevOps practices and CI/CD tools.
Knowledge of orchestration tools.
COMPENSATION AND BENEFITS:
$162,000 - $226,000

Base salary is just one part of our total rewards package at 𝕏, which also includes equity, comprehensive medical, vision, and dental coverage, access to a 401(k) retirement plan, short & long-term disability insurance, life insurance, and various other discounts and perks.

ITAR REQUIREMENTS:
To conform to U.S. Government export regulations, applicant must be a (i) U.S. citizen or national, (ii) U.S. lawful, permanent resident (aka green card holder), (iii) Refugee under 8 U.S.C. § 1157, or (iv) Asylee under 8 U.S.C. § 1158, or be eligible to obtain the required authorizations from the U.S. Department of State.
