Production Engineer
Location: Abu Dhabi
Salary: AED 14,000 - 18,000

Industry: Vehicle Manufacturing

Job Brief:

We are seeking an experienced Production Engineer to lead and optimize manufacturing operations within a specialist vehicle manufacturing environment. The role is responsible for driving continuous improvement initiatives, leading production teams, improving build quality, and ensuring the efficient delivery of high-quality products while maintaining strict safety and operational standards.

This Production Engineer Job in Abu Dhabi is ideal for professionals with strong production leadership experience, a passion for Lean and Continuous Improvement methodologies, and expertise in vehicle manufacturing, fabrication, or heavy engineering environments.

Job Responsibilities:

Production Leadership & Optimisation

- Lead, mentor, and manage a team of 50+ production operatives, technicians, and fabricators.
- Own end-to-end production operations from chassis-in to final product sign-off.

- Drive measurable reductions in production cycle time, defect rates, and labour hours through structured Agile and Continuous Improvement programs.
- Develop and maintain production schedules, capacity plans, and resource allocation to achieve on-time delivery targets.
- Implement visual management tools to improve workflow visibility across the shop floor.
- Establish, improve, and develop Method Statements (MoS) to ensure clear and efficient production methods.

Vehicle Fabrication & Manufacturing

- Oversee all aspects of fabrication and manufacturing operations, including structural fabrication, panel fitting, welding, assembly, and finishing activities.
- Establish and enforce Standard Operating Procedures (SOPs) and Method Statements (MoS) to ensure repeatability and consistency.
- Collaborate with design and engineering teams to resolve manufacturing issues and support new product introductions.
- Conduct or oversee pre-delivery inspections to ensure products meet company quality standards.

Health, Safety & HSE Compliance

- Champion a zero-harm safety culture across the production floor and ensure full compliance with UAE health and safety regulations.
- Conduct regular HSE risk assessments and toolbox talks.
- Maintain HSE records, SDS registers, and staff training logs.
- Lead incident investigations, root cause analyses, and corrective action implementation.
- Ensure all employees receive appropriate PPE, inductions, and ongoing safety training.

Continuous Improvement

- Champion an Agile and Continuous Improvement mindset throughout the production team.
- Identify production bottlenecks using value stream mapping, 5S, and root cause analysis tools.
- Lead structured Continuous Improvement projects with measurable outcomes.
- Report project progress and outcomes to senior management with supporting data and ROI analysis.

Stakeholder Collaboration

- Work closely with Supply Chain, Procurement, and Stores teams to ensure material availability.
- Liaise with Sales and Project Management teams to understand customer requirements and delivery commitments.
- Provide regular production performance reporting, highlighting risks, opportunities, and corrective actions.

Job Requirements:

- Bachelor's Degree in Mechanical Engineering, Automotive Engineering, Manufacturing Engineering, or a related discipline.
- Minimum 7 years of production or manufacturing engineering experience.
- At least 3 years in a lead or senior role managing teams of six or more employees.
- Demonstrable track record of delivering measurable production improvements.
- Strong practical knowledge of vehicle manufacturing, fabrication, metalwork, bodybuilding, or heavy engineering manufacturing.

- Proven expertise in Agile, Lean, or Continuous Improvement methodologies.
- Solid knowledge of HSE regulations and safety management within a manufacturing environment.
- Strong leadership, coaching, and people management skills.
- Data-driven approach with proficiency in production reporting and KPI management.
- Fluency in English, both written and spoken.
- Experience in emergency vehicles, specialist vehicles, or similar manufacturing environments will be an advantage.
- Lean or Six Sigma certification will be an advantage.
- Familiarity with UAE health and safety regulations and GCC experience will be an advantage.
- Experience with ERP or MRP systems in a production environment will be an advantage.
- Proficiency in Arabic and/or Hindi will be an advantage.
